

the 1990s, the number of people in the world who are under 15 years of age is expected to increase from 1.1 billion to 1.5 billion.

As the world's population grows, the demand for food and other resources will increase. This will put pressure on the environment and on the world's food supply.

One way to meet this demand is to increase the amount of food that is produced. This can be done by using more land for agriculture, by using more water, or by using more fertilizers.

Another way to meet this demand is to increase the efficiency of food production. This can be done by using better farming techniques, by using better seeds, or by using better fertilizers.

There are many ways to meet the world's growing demand for food and other resources. It is up to us to decide which way is best.

One of the most important things we can do is to make sure that we are using resources in a sustainable way. This means that we are using resources in a way that will not harm the environment or the future generations.

There are many things we can do to make sure that we are using resources in a sustainable way. We can use less energy, we can use less water, and we can use less land.

We can also make sure that we are using resources in a way that will not harm the environment. This means that we should not pollute the air, the water, or the land.

There are many things we can do to make sure that we are using resources in a sustainable way. It is up to us to decide which way is best.
